Solving for Safer

How ecosystem
intelligence drives smarter
decisions, stronger
compliance, and people-
first protection

From fragmented systems to intelligent enterprise performance

Safety is no longer a single system problem.

It is a coordination challenge, an intelligence challenge, and ultimately a decision-making challenge.

Enterprise organizations today operate across distributed sites, hybrid workforces, and increasingly complex regulatory environments. At the same time, expectations for rapid response, workforce protection, and operational transparency have never been higher.

Yet many enterprises still rely on disconnected video systems, access controls, communication platforms, and manual reporting processes that slow response and fragment accountability.

Motorola and Convergent address this challenge through a connected ecosystem approach, building and connecting technologies so organizations can move from reactive security tools to proactive, performance-driving workflows.

Solving for Safer means closing the response gap without compromising compliance or trust.

The modern enterprise safety challenge

Traditional security environments were designed to record incidents, not orchestrate response.

As a result, leaders often lack:

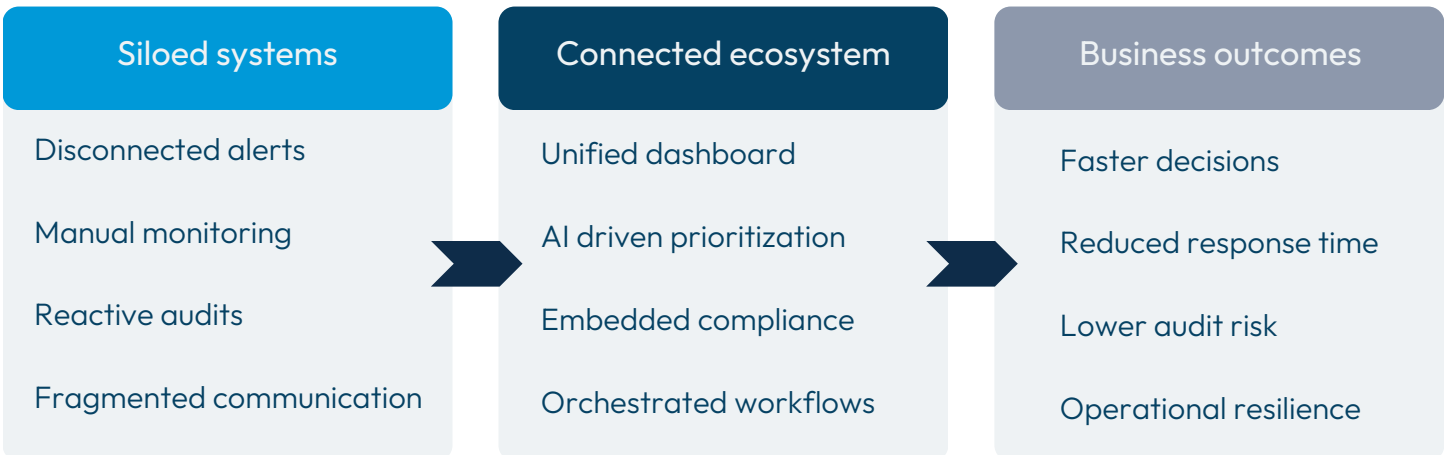

- Enterprise-wide visibility across locations
- Consistent standards across sites
- Real-time operational clarity during incidents
- Confidence during audits or compliance reviews

Manual monitoring and fragmented alerting systems increase:

- Response delays
- Compliance exposure
- Operator fatigue and employee stress

Compliance requirements continue to expand, while headcount and resources remain constrained. The issue is not the absence of technology. It is the absence of coordination.

The path to better business outcomes

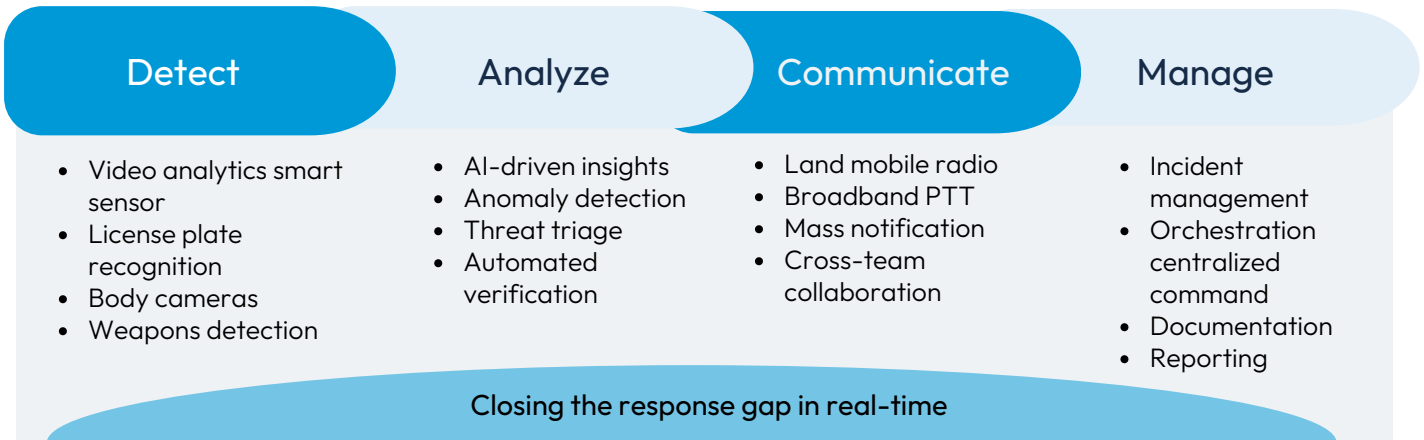

What Solving for Safer really means

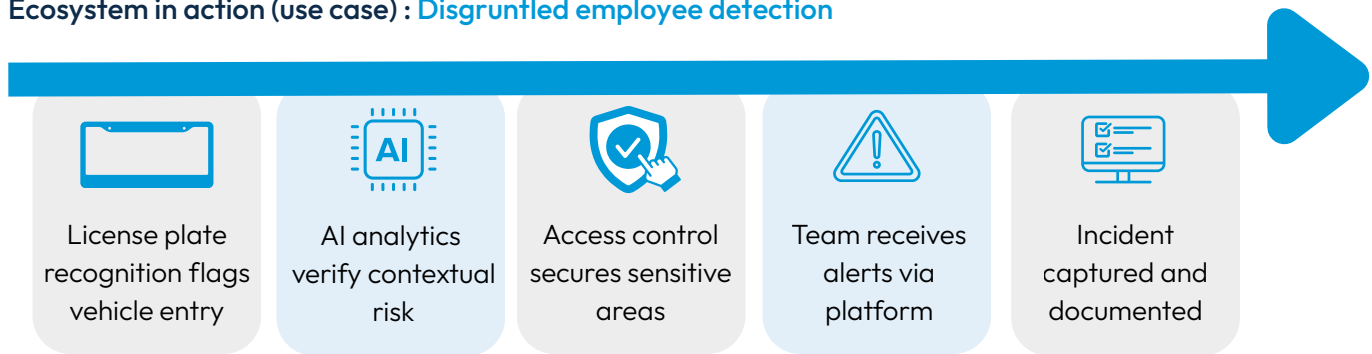

Solving for Safer is not about adding more tools. It's about building and connecting technologies so people can detect earlier, decide faster, and act with confidence across every site and every role.

Motorola's ecosystem integrates safety technologies into synchronized workflows that operate in four continuous phases:

Ecosystem Intelligence Model

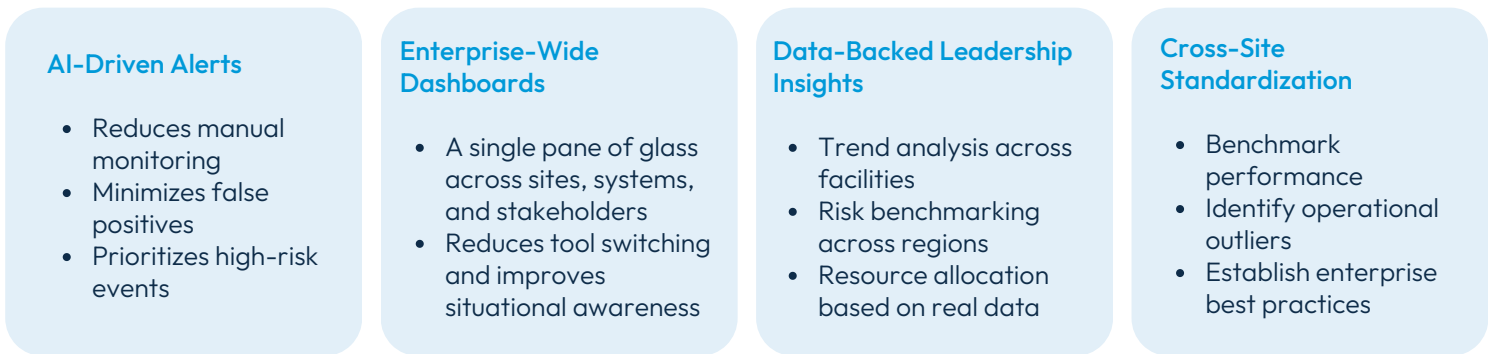

Ecosystem in action (use case) : Disgruntled employee detection

Smarter, faster decisions at enterprise scale

When intelligence is unified, safety becomes a performance advantage.

Powering safety across the Nation's most critical environments

*Statistics above cite data from top U.S. cities based on population, top U.S. school districts based on enrollment, top U.S. hospitals based on number of beds and top U.S. stadiums based on capacity.

Technology foundation

Solution	Role in ecosystem	Enterprise impact
inform	AI powered SOC automation	Reduces operator workload and accelerates decision-making
Avigilon Alta	Cloud-native video and access control platform	Unified visibility across distributed sites
Avigilon Unity	Enterprise VMS and access integration	Centralized security management
HALO Smart Sensors	Privacy-area detection and environmental monitoring	Proactive risk detection where cameras cannot operate
Body-worn cameras	Real-time accountability and evidence capture	Transparency and incident documentation
Orchestrate	No-code automation layer	Automated response and coordinated workflows

Solving for Safer prioritizes human-centered safety design that strengthens accountability and trust.

Outcomes

- Real-time alerts reduce uncertainty and response delays
- Role-based access protects operational integrity and privacy
- Automated workflows reduce cognitive overload
- Proactive safety investments improve morale and retention

Supporting use case examples

- HALO sensors protect privacy-sensitive environments
- Body cameras enhance transparency and accountability
- Panic alerts and lone-worker workflows reduce isolation risk

“In environments where cameras aren’t appropriate, such as classrooms or patient rooms, HALO smart sensors can detect critical indicators like distress calls, gunshots, or glass break events, enabling rapid response without compromising privacy.”

The Convergent advantage

Motorola Solutions delivers the connected safety ecosystem. Convergent helps support performance.

As a global systems integrator with deep vertical expertise, Convergent designs, integrates, and services the Motorola ecosystem to help deliver consistent, scalable results across distributed enterprises.

We design with purpose

Aligning technology architecture with operational, regulatory, and business objectives.

We integrate without complexity

Connecting video, access, communications, automation, and legacy systems into one coordinated environment.

We service for the long term

Delivering lifecycle support, compliance alignment, and continuous optimization to sustain performance.

By integrating colleagues, capabilities, systems, and services, Convergent turns complexity into clarity, helping to ensure the ecosystem drives measurable outcomes, not just connectivity.

Motorola

Connected Safety Ecosystem
Builds & Connects Technology

Video & Access Control
AI & Analytics
Sensors & Detection
Communications
Incident Management
Orchestration Layer

Outcome:

Integrated Intelligence

Strategic Design
Enterprise Integration
Lifecycle Services
Vertical Expertise

Convergent

Execution & Optimization
Designs, Integrates & Sustains

Architecture & Road mapping
Multi-Site Deployment
Legacy Interoperability
Compliance Alignment
Preventative Maintenance
Ongoing Optimization

Outcome:

Operational Confidence

Smarter decisions | stronger compliance | people-first protection
consistent enterprise standards | scalable global operations

Building the path forward: Solving for Safer does not require starting over. It begins with:

Establishing
visibility

Connecting
existing systems

Standardizing
workflows

Scaling intelligence
over time

The goal is not more technology.
The goal is better, intelligence driven decisions.

Solving for Safer means connecting what you already have into an ecosystem that enables people to make faster, smarter, and more confident decisions every day.
